#### **GENERAL PRODUCT INFORMATION:**

Product Description -

- 1. Mini Multi-Mode Gateway which is intended to be used for audio/video, information and communication technology equipments.
- The Mini Multi-Mode Gateway supplied by an ES1/PS1 DC power source during test.
   Copy of Marking Plate:
   See on the product.

#### **ENERGY SOURCE IDENTIFICATION AND CLASSIFICATION TABLE:**

(Note 1: Identify the following six (6) energy source forms based on the origin of the energy.)

(Note 2: The identified classification e.g., ES2, TS1, should be with respect to its ability to cause pain or injury on the body or its ability to ignite a combustible material. Any energy source can be declared Class 3 as a worse case classification e.g. PS3, ES3.

#### **Electrically-caused injury (Clause 5):**

(Note: Identify type of source, list sub-assembly or circuit designation and corresponding energy source classification)

Example: +5 V dc input ES

Source of electrical energy	Corresponding classification (ES)
Input	ES1
All Internal circuits	ES1

#### **Electrically-caused fire (Clause 6):**

(Note: List sub-assembly or circuit designation and corresponding energy source classification)

Example: Battery pack (maximum 85 watts): PS2

Source of power or PIS	Corresponding classification (PS)
Input	PS1
All Internal circuits	PS1

#### Injury caused by hazardous substances (Clause 7)

(Note: Specify hazardous chemicals, whether produces ozone or other chemical construction not addressed as part of the component evaluation.)

Example: Liquid in filled component Glycol

Source of hazardous substances	Corresponding chemical	
N/A (Built-in component, considered in end system)	N/A	

#### Mechanically-caused injury (Clause 8)

(Note: List moving part(s), fan, special installations, etc. & corresponding MS classification based on Table 35.)

Example: Wall mount unit MS2

Source of kinetic/mechanical energy	Corresponding classification (MS)				
Plastic fan blades	N/A (Built-in component, considered in end system)				

#### Thermal burn injury (Clause 9)

(Note: Identify the surface or support, and corresponding energy source classification based on type of part, location, operating temperature and contact time in Table 38.)

Example: Hand-held scanner – thermoplastic enclosure TS1

Source of thermal energy	Corresponding classification (TS)		
Accessible parts	N/A (Built-in component, considered in end system)		

#### Radiation (Clause 10)

(Note: List the types of radiation present in the product and the corresponding energy source classification.)

Example: DVD – Class 1 Laser Product RS1

Type of radiation	Corresponding classification (RS)
N/A	N/A

- [5] (\*) IEC60990, sub-clause 6.2.2.2 is not applicable if switch or disconnect device (e.g., appliance coupler)

6.2.2	T	able: Electrical pov	ver sources (PS) me	asurements for classification	ntion	P
Source		Description	Measurement	Max Power after 3 s	Max Power after 5s*	PS Classification
A	7	Input / all internal	Power (W): VA (V):		<del></del> /-	~
	4	circuits	IA (A):	W - 6		PS1
1	3	Z,	IA (A):	72 - 74		5 3

Supplementary Information: (\*) Measurement taken only when limits at 3 seconds exceed PS1 limits

6.2.3.1 Table: Determination of Potential Ignition Sources (Arcing PIS)										
Location	Open circuit	Measured r.m.s	Calculated value	Arcing PIS?						
	Voltage After 3 s(Vp)	current(Irms)	(Vp x Irms)	Yes / No						
	\$ P	-42	5	- 4						

#### Supplementary information:

An Arcing PIS requires a minimum of 50 V (peak) a.c. or d.c. An Arcing PIS is established when the product of the open circuit voltage (Vp) and normal operating condition rms current (Irms) is greater than 15.

7	6.2.3.2	Tal	ole: Determination of P	otential Ignition S	Sources (Resistive	PIS)	N/.	A
	Circuit Locati	Circuit Location Operating		Measured	Measured Protective Circuit,		Resistive	
	(x-y)		Condition	wattage or VA	wattage or VA	Regulator, or PTC	PIS?	
			(Normal / Describe	During first 30	After 30 s (W	Operated?	Yes/No	
A			Single Fault)	s (W / VA)	/VA)	Yes / No		
						(Comment)		
	37,		- 24 3	F - 8	- 8	- 6	<u>Z</u> ,	8

#### Supplementary Information:

A combination of voltmeter, VA and ammeter IA may be used instead of a wattmeter.

If a separate voltmeter and ammeter are used, the product of (VA x IA) is used to determine Resistive PIS classification.

A Resistive PIS: (a) dissipates more than 15 W, measured after 30 s of normal operation, or (b) under single fault conditions has either a power exceeding 100 W measured immediately after the introduction of the fault if electronic circuits, regulators or PTC devices are used, or has an available power exceeding 15 W measured 30 s after introduction of the fault.
